

# VMASS

## Introducing the Industry's Only Variable Make-Up Air System

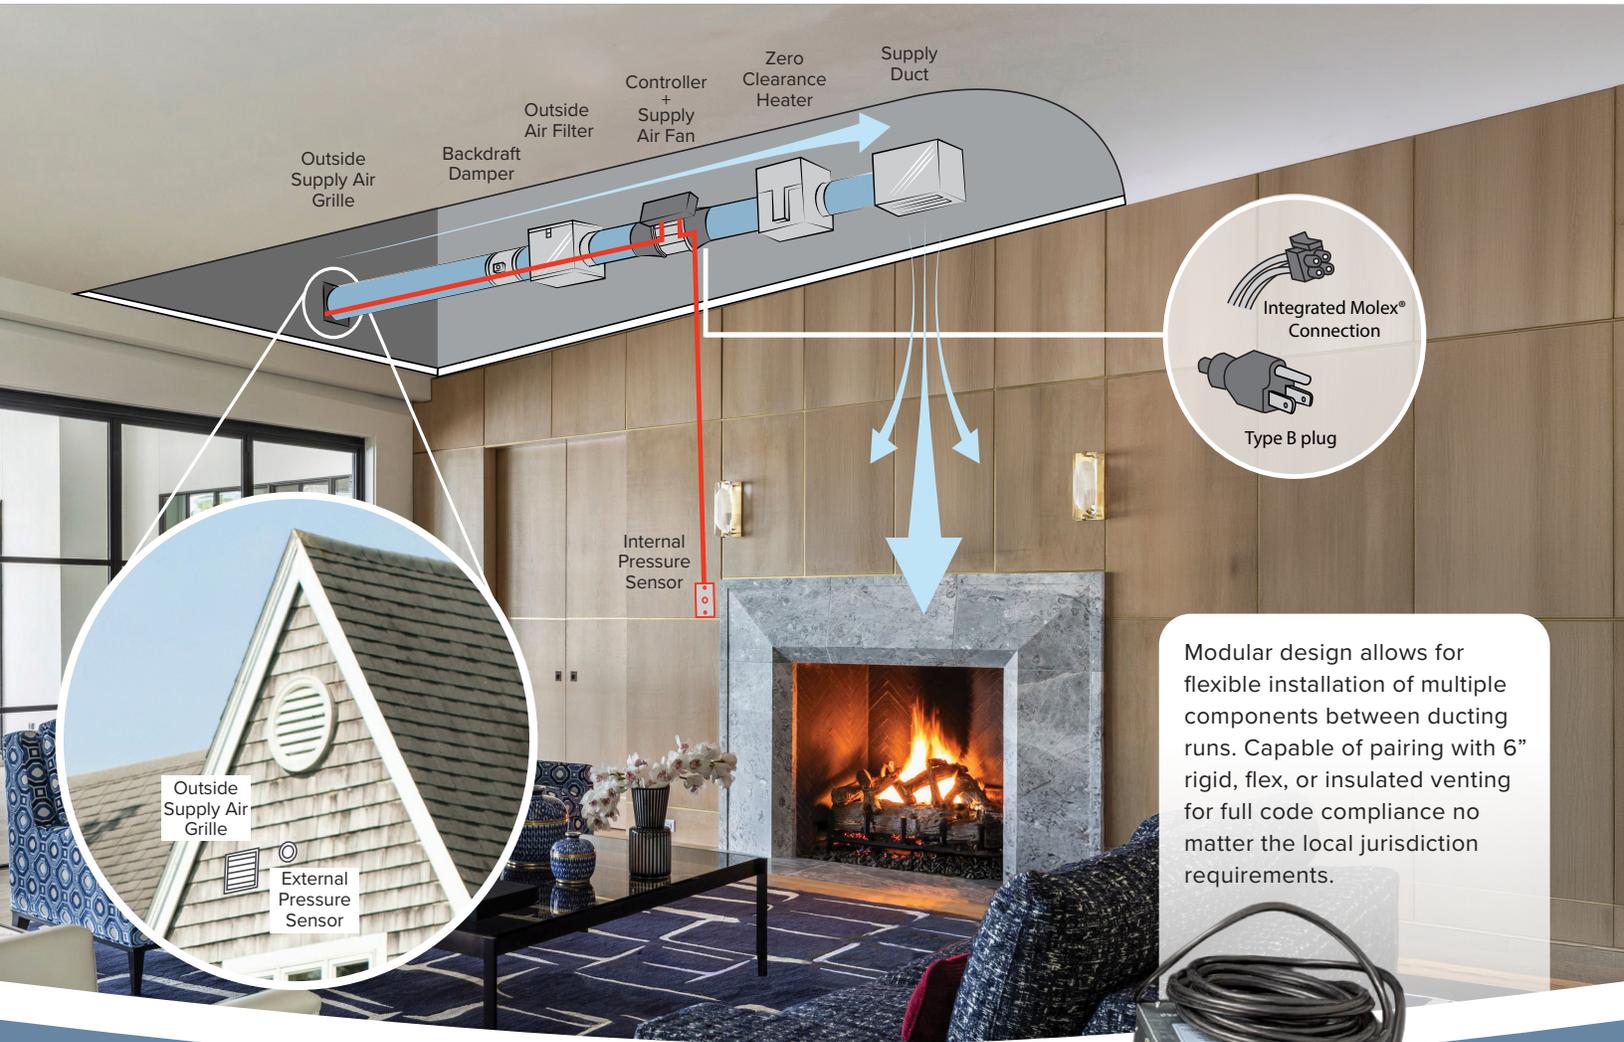

Designed specifically to provide additional conditioned air into spaces where the combustion or exhaust process is affected by negative pressure conditions. Utilizing proprietary X-Ventiso XV-Flux algorithms, the VMASS provides make-up air at the precise CFM levels necessary to maintain a positive pressure environment.

With true self-modulating control, this system provides an efficient method of air delivery without sacrificing performance as demand shifts. Fully integrated with XV fan series.

X-Ventiso provides the building industry with the only true solution for independent makeup air. Utilizing a dedicated supplemental air supply system, **VMASS** units deliver exactly what you need to maintain positive pressure within the building envelope. Using a dual zone pressure sensing system these units bring equilibrium to external and internal barometric levels around the building envelope, resulting in a balanced environment with straight-forward operation and installation.

**1** HEPA rated air filtration system utilizing washable filtration media

**2** Ultra quiet, inline fan design with integrated mounting brackets for multi directional installation.

**3** Proprietary X-Ventiso Meridian series controller, for true hands-off performance, automatically supplying 20CFM to 400CFM, as needed. Fully 120v Plug-and-Play with simplified Molex connections and type B power plug.

**4** Zero clearance, adjustable temperature heating unit mounts directly to joists in attics or crawl spaces for flexible installation.
